## EXTRA QUESTIONS FOR TYBSC SEM V ATKT (PAPER III)

| 1 | Every finite metric space is |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | (a) | not compact | (b) | compact |
|  | (c) | bounded | (d) | closed |
| 2 | R with respect to the usual metric is |  |  |  |
|  | (a) | compact | (b) | not compact |
|  | (c) | closed | (d) | bounded |
| 3 | Let $\mathrm{X}=\mathrm{R}$, d is the usual metric. Let $\mathrm{A}=\{1 / \mathrm{n}: \mathrm{n} \in \mathrm{N}\} \cup\{0\}$. Then |  |  |  |
|  | (a) | A is not compact subset of R | (b) | A is compact subset of R |
|  | (c) | A is compact and closed subset of R | (d) | A is compact and bounded subset of R |
| 4 | Let (X, d) be ametric space. Let A, B be subsets of X be a compact subsets of X. Then |  |  |  |
|  | (a) | only $A \cap B$ is compact | (b) | $A \cup B$ and $A \cap B$ both are compact |
|  | (c) | only $A \cup B$ is compact | (d) | A * B is compact |
| 5 | Any compact subset of a metric space is |  |  |  |
|  | (a) | closed | (b) | closed and bounded |
|  | (c) | bounded | (d) | neither closed nor bounded |
| 6 | A metric space (X,d) is said to have Bolzano-Weierstrass property (BWP) if |  |  |  |
|  | (a) | every finite subset of X has a limit point. | (b) | every infinite subset of X has a limit point. |
|  | (c) | every bounded subset of X has a limit point. | (d) | every infinite and bounded subset of X has a limit point. |
| 7 | A metric space (X,d) is said to be sequentially compact if every sequence in X has a |  |  |  |
|  | (a) | convergent sequence | (b) | convergent subsequence |
|  | (c) | divergent subsequence | (d) | divergent sequence |
| 8 | Every sequentially compact metric space is |  |  |  |
|  | (a) | not compact | (b) | compact |
|  | (c) | closed | (d) | complete |
| 9 | Let A and B be two subsets of a metric space X such that A is closed and B is compact, then |  |  |  |
|  | (a) | $\mathrm{A}+\mathrm{B}$ is compact | (b) | $A \cap B$ is compact |
|  | (c) | A * B is compact | (d) | A* B and $\mathrm{A}+\mathrm{B}$ both are compact |
| 10 | Heine- Borel theorem states that |  |  |  |

|  | (a) | every open interval in R is compact | (b) | every closed and bounded interval in R is <br> compact |
| :--- | :--- | :--- | :--- | :--- |
|  | (c) | every open and bounded interval in <br> R is compact | (d) | every closed and unbounded interval in R <br> is compact |
| 11 |  |  | Let $(X, d)$ be a metric space and $A$ be a compact subset of $X$ and $B$ be closed subset <br> of $X$ such that $A \cap B=\varnothing$, then |  |
|  | (a) | $d(A, B)<0$ | (b) | $d(A, B)>0$ |
|  | (c) | $d(A, B)=0$ | (d) | $d(A, B)$ not equal to 0 |
