

COURSE OUTCOME – FINANCIAL MARKETS

Programme Outcome / Programme Specific Outcome

The B.Com Financial Markets - BFM

This programme was created with the goal of making students employable and providing industry-relevant training. The tremendous growth in the field of global financial markets over the last two decades has made it an emerging field in the world, and thus an interesting, upcoming, and lucrative career path. The course is a comprehensive three-year undergrad programme designed to meet the niche demand for financial market professionals who can analyse debt, equity, capital, and commodities markets with a focus on stock trading, equity research, and financial analysis. It is an excellent course for anyone interested in a career in the ever-growing and ever-changing field of Financial Markets.

Bachelor of Financial Markets (BFM) degrees provide theoretical and practical knowledge of efficiently planning, organising, monitoring, guiding, and influencing an organization's or company's capital resources. It also focuses on a thorough analysis and study of financial markets, the fundamentals of trading and its regulation, market forces, demand, and supply, all of which are critical components of finance in any organization. Debt and equity shares are critical financial assets in any organisation. Candidates who pursue the course are trained through presentations, interactions with industry personnel, industrial projects, practical sessions, and so on. They are well-equipped to comprehend the risks, money, economics, and legal parameters of a financial market.

Whether one is an executive or an admittance employee, the work environment now requires broadened mindsets and qualifications for a variety of positions. This radical shift is influenced by a changing workforce, the recent economic meltdown, and changing demographics. Today's calibrated technical and specialised skills may become largely redundant in the near future. Furthermore, traditional degrees are becoming obsolete and even irrelevant in today's workforce. The new Bachelor of Financial Markets curriculum provides students with core papers that help them build their foundation in the field of financial markets. Students can pursue an area of interest in the financial markets by taking electives and skill enhancement courses.

Each course's content has been carefully designed to provide students with skills and competencies that will not only prepare them for the workforce but will also foster entrepreneurial and innovative thinking. A specialised degree accomplishes this, as well as preparing the student for future growth and life-long learning. With this goal in mind, this course is introduced, which includes a transition from general education to professional education.
